This paper is a supplement to

another PAS white paper, "Understanding and Applying the ISA-18.2 Alarm Management Standard." Reading and understanding that paper is essential prior to tackling this one. Important material regarding the Life Cycle, the regulatory

implications, and practical advice are not duplicated in this paper.

UnderstandingIEC 62682 Alarm Management Standard - PAS Alarm management is the application of human factors along with instrumentation

engineering and systems thinking to manage the design of an alarm system to increase its usability. Most often the major usability problem is that there are too many alarms annunciated in a plant upset, commonly referred to as alarm flood, since it is so

similar to a flood caused by excessive rainfall input with a basically fixed drainage output capacity. However, there can also be other problems with an alarm system

Alarm management - Wikipedia

PAS, Inc. "We are very pleased that PAS has been recognized again as the global market leader for alarm management." The company also announced that the same study found PAS to be the #1 global market leader in the Oil & Gas and Mining sectors as well

as the #2 market leader in the Europe, Middle East, & Africa and Asia regions, Refining and Chemical sectors, and Services.
