Animal cells have centrioles while plant cells don't. The primary cilium isn't present in plant cells. Animal cells have a primary cilium to detect external stimuli, and some animal cells have more cilium to make the cell move. Plant cells need to digest lipids, which is why they have organelles known as glyoxysomes.

Herbivores (like zebras) are those animals that don't eat meat, and rely on plants and algae for their nutrition.

Carnivores (like lions) primarily eat other animals, and omnivores (like us humans) will eat just about anything.

We mean that as a compliment.

Collectively, animals are called heterotrophs, meaning that have to eat something else as food.
