The basic unit of body structure is the cell. Cells have the same
basic structure. Function, size, and shape may differ. Cells are very
small. You need a microscope to see them. Cells need food, water,
and oxygen to live and function. Figure 10-1 shows the cell and its
structures. The cell membrane is the outer covering. It encloses the
cell and helps hold the cell's shape.

Body Structure and Function

The structures involved include the nasal passage, the trachea, and
the lungs. The respiratory system takes oxygen from the
environment to be used throughout the body. In humans, oxygen is
taken into the body by the lungs, where it and rapidly diffuses into
the blood.

Body Structures And Functions Body Structures And Functions

There are different cavities in the human body that house various organ systems. The cranial cavity is the space within the skull, it protects the brain and other parts of the central nervous system. The lungs are protected in the pleural cavity. The abdominal cavity houses the intestines, liver and spleen.

Human Body - Anatomy and Physiology of Human Body - BYJUS

Figure 3. Organ Systems of the Human Body (continued). Organs that work together are grouped into organ systems. The organism level is the highest level of organization. An organism is a living being that has a cellular structure and that can independently perform all physiologic functions necessary for life. In multicellular organisms, including humans, all cells, tissues, organs, and organ ...
