This book attempts to capture the spirit of the 'Bronze Age' of video games, when video games were designed as circuits, not as software. We'll delve into these circuits as they morph from Pong into programmable personal computers and game consoles. Instead of wire-wrap and breadboards, we'll use modern tools to approximate these old designs in a simulated environment from the comfort of our keyboards. At the end of this adventure, you should be well-equipped to begin exploring the world of FPGAs, and maybe even design your own game console. You'll use the [8bitworkshop.com](http://8bitworkshop.com) IDE to write Verilog programs that represent digital circuits, and see your code run instantly in the browser.

This book studies the industrial development of Japan since the mid-nineteenth century, with particular emphasis on how the various industries built technological capabilities. The Japanese were extraordinarily creative in searching out and learning to use modern technologies, and the authors investigate the emergence of entrepreneurs who began new and risky businesses, how the business organizations evolved to cope with changing technological conditions, and how the managers, engineers, and workers acquired organizational and technological skills through technology importation, learning-by-doing, and their own R & D activities. The book investigates the interaction between private entrepreneurial activities and public policy, through a general examination of economic and industrial development, a study of the evolution of management systems, and six industrial case studies: textile, iron and steel, electrical and communications equipment, automobiles, shipbuilding and aircraft, and pharmaceuticals. The authors show how the Japanese government has played an important supportive role in the continuing innovation, without being a substitute for aggressive business enterprise constantly venturing into unfamiliar terrains.

Cellular telephones, satellite communications and radar systems are adding to the increasing demand for radio frequency circuit design principles. At the same time, several generations of digitally-oriented graduates are missing the essential RF skills. This book contains a wealth of valuable design information difficult to find elsewhere. It's a complete 'tool kit' for successful RF circuit design. Written by experienced RF design engineers from Motorola's semiconductors product section. Book covers design examples of

circuits (e.g. amplifiers; oscillators; switches; pulsed power; modular systems; wiring state-of-the-art devices; design techniques).

“Everything begins with a kiss. We are born in our parents’ first kiss and our earliest memories are of our mother’s fond kisses. Kisses come on kisses, and of the kisses that follow none seems more intense than our first romantic kiss. We are kissed by fortune, by love. We shape our most potent desires with our lips. Kisses are the electric gates of love and passion. Like summer lightning, kisses dance, they wriggle, they slip away.” Did kissing originate as a by-product of “pre-mastication,” that is, the transfer of a mother’s soft, prechewed food into the mouth of her infant? Does a pooch—or any other animal—smooch? Can a mother’s kiss symbolically suck out the evil force that is causing her child pain? How is a sniff-kiss different from a mouth kiss? And how does a lipstick’s rosy hue harken back to a woman’s subconscious labial awareness? These tantalizing questions and many more are answered in *Kiss and Tell*, the first comprehensive book to embrace the subject of kissing in sensuous detail. Author and journalist Julie Enfield offers us a panoply of kisses, from the celebrated French kiss to the unforgettable first kiss. She explores how each of our five senses enhances and informs a kiss, and reveals the sometimes surprising chemistry behind desire. From a fascinating exposé of literary, film, and artistic kisses to a lush landscape of lipstick and iconic pouts, this playfully designed and beautifully packaged book is the ultimate guide to lip reading—and a perfect gift of love.
