Minimally Invasive Surgery (MIS) utilizes specially designed tools to work through targeted, smaller skin incisions. This technique essentially allows all of the cutting, shaping, or fixation of surgery to be done from the inside, rather than opening the skin with a larger, traditional incision to completely expose the work area.

Minimally invasive surgery is also known as arthroscopy. It is a leading surgical technique used to investigate, diagnose and treat problems inside a joint.

~~Minimally Invasive Surgery in Kenya | Orthopedic Center in ...~~

Minimally invasive surgery is a surgery minimizing surgical incisions to reduce trauma to the body. This type of surgery is usually performed using thin-needles and an endoscope to visually guide the surgery. The indications for minimally invasive surgery are the same as those for traditional open surgery.
