The renowned communications theorist Robert Gallager brings his lucid writing style to the study of the fundamental system aspects of digital communication for a one-semester course for graduate students. With the clarity and insight that have characterized his teaching and earlier textbooks, he develops a simple framework and then combines this with careful proofs to help the reader understand modern systems and simplified models in an intuitive yet precise way. A strong narrative and links between theory and practice reinforce this concise, practical presentation. The book begins with data compression for arbitrary sources. Gallager then describes how to modulate the resulting binary data for transmission over wires, cables, optical fibers, and wireless channels. Analysis and intuitive interpretations are developed for channel noise models, followed by coverage of the principles of detection, coding, and decoding. The various concepts covered are brought together in a description of wireless communication, using CDMA as a case study.

With exceptionally clear writing, Lathi takes students step by step through a history of communications systems from elementary signal analysis to advanced concepts in communications theory. The first four chapters of the text present basic principles, subsequent chapters offer ample material for flexibility in course content and level. All Topics are covered in detail, including a thorough treatment of frequency modulation and phase modulation. Numerous worked examples in each chapter and over 300 end-of-chapter problems and numerous illustrations and figures support the content.

An accessible, yet mathematically rigorous, one-semester textbook, engaging students through use of problems, examples, and applications.

Explore Modern Communications and Understand Principles of Operations, Appropriate Technologies, and Elements of Design of Communication Systems Modern society requires a different set of communication systems than has any previous generation. To maintain and improve the contemporary communication systems that meet ever-changing requirements, engineers need to know how to recognize and solve cardinal problems. In Essentials of Modern Communications, readers will learn how modern communication has expanded and will discover where it is likely to go in the future. By discussing the fundamental principles, methods, and techniques used in various communication systems, this book helps engineers assess, troubleshoot, and fix problems that are likely to occur. In this reference, readers will learn about topics like: How communication systems respond in time and frequency domains Principles of analog and digital modulations Application of spectral analysis to modern communication systems based on the Fourier series and Fourier transform Specific examples and problems, with discussions around their optimal solutions, limitations, and applications Approaches to solving the concrete engineering problems of modern communications based on critical,

logical, creative, and out-of-box thinking For readers looking for a resource on the fundamentals of modern communications and the possible issues they face, Essentials of Modern Communications is instrumental in educating on real-life problems that engineering students and professionals are likely to encounter.

This handbook on Mediatization of Communication uncovers the interrelation between media changes and changes in culture and society. This is essential to understand contemporary trends and transformations. “Mediatization” characterizes changes in practices, cultures and institutions in media-saturated societies, thus denoting transformations of these societies themselves. This volume offers 31 contributions by leading media and communication scholars from the humanities and social sciences, with different approaches to mediatization of communication. The chapters span from how mediatization meets climate change and contribute to globalization to questions on life and death in mediatized settings. The book deals with mass media as well as communication with networked, digital media. The topic of this volume makes a valuable contribution to the understanding of contemporary processes of social, cultural and political changes. The handbook provides the reader with the most current state of mediatization research.

The authors give a detailed summary about the fundamentals and the historical background of digital communication. This includes an overview of the encoding principles and algorithms of textual information, audio information, as well as images, graphics, and video in the Internet. Furthermore the fundamentals of computer networking, digital security and cryptography are covered. Thus, the book provides a well-founded access to communication technology of computer networks, the internet and the WWW. Numerous pictures and images, a subject-index and a detailed list of historical personalities including a glossary for each chapter increase the practical benefit of this book that is well suited as well as for undergraduate students as for working practitioners.

This notwithstanding, over the years, the African culture in all its manifestations became the bulls eye for attack especially during the Atlantic Slave Trade, Colonialism, Racism. During these periods, Europe dealt coup de grace to the African personality, to his is-ness, by destroying the African cultural values. They disrespected African peculiarities, languages enriched with traditions of centuries, parables, many of them the quintessence of family and national histories; modes of thought, influenced more or less by local circumstances, local poetry which reveals the profundity of African literary wizardry. A lot of these were altered against the background that the African in all his susceptibilities is an inferior race and that it is needful to give him a foreign model beacon to emulate and follow. In our time of globalization, bringing about a new sweep of changes on the African cultural values, a more careful, historically grounded interpretation of the cultural changes occurring on the continent is, therefore, needed and for it to be useful, it should enable us to transcend the narrow and narrowing parameters that currently dominate the discourse on the processes and structures of change occurring in contemporary Africa. This piece is a great accomplishment by African scholars to do a grounded hermeneutics of the structures of changes taking place in Africa. The different chapters are the fruits of the 2018 International Conference of the Association for the Promotion of African Studies (APAS). The authors, like artists, combine originality with insightful imagination. They have carefully treated the historical, conceptual, basic and substantive issues in cultural change in Africa. Their coherent, systematic and encyclopedic approaches have the capacity to expand the intellectual and professional horizon of its readers.

This volume brings together multidisciplinary, situated and nuanced analyses of contingent issues framing a rapidly changing India in the 21st century. It moves beyond the ready dichotomies that are often extended to understand India as a series of contrasts and offers new insights into the complex realities of India today, thereby enabling us to anticipate the decades to come. The editors focus on three major themes, each discussed in a section: The first section, Framing the Macro-Economic Environment, defines the framework for interrogating globalisation and socio-economic changes in India over the last few decades of the 20th century spiraling into India in the 21st century. The next section, Food Security and Natural Resources, highlights critical considerations involved in feeding a burgeoning population. The discussions pose important questions in relation to the resilience of both people and planet confronting increasingly unpredictable climate-induced scenarios. The final section, Development, Activism and Changing Technologies, discusses some of the social challenges of contemporary India through the lens of inequalities and emergent activisms. The section concludes with an elaboration of the potential and promise of changing technologies and new social media to build an informed and active citizenry across existing social divides.
