What starts with innocent maneuvering and flattery of a gay boss to earn a work trip to London ends with near death in a brothel. Thus begins Obvious Conclusions, stories of a Midwestern emigrant influenced and corrupted by many years living in San Francisco and abroad. From bidet mishaps, to delicious online encounters, Obvious Conclusions embraces a life that is both debaucherous and delightful!

The book "Computer Concepts and C Programming" is designed to help the Engineering students of all Indian Universities. This book is written as per the new syllabus of the Visveswaraiiah Technological University, Belgaum, India and it satisfies all the requirements of I/II semester students who aspire to learn the fundamentals of computers and C Programming. C is a structured programming language. This is most popular and a very powerful programming language. It is standardized and portable across multiple operating systems. C has been the most sought after programming language for developing the system software such as device drivers, compilers, parts of operating systems, interpreters for languages like Java, Prolog, etc. Among other popular programming languages like C++, Java and C#, C retained its position in software development activities. This book provides more than 100 example programs. All these programs are executed and tested on Borland C++ compiler and with the vi editor on UNIX. All the laboratory assignments are provided in Appendix–A. There are 150 multiple choice questions given for the readers to test their knowledge of C language.

Does God exist? Can spirituality be integrated with science? Is happiness possible? Do miracles really happen? Not only does The Visionary Window answer " yes" to all of these questions, but it skillfully combines the fields of philosophy, cosmology, religion, and psychology to form a new way of thinking about science and spirituality. Stepping beyond the classic work of prominent seventies physicist Frijof Capra, Goswami details his own pioneering exploration of science and spirit, revealing the complete integration between modern science and spiritual traditions. Using stories and colorful examples from pop culture, Goswami addresses complex issues in language and terminology easily accessible to the lay reader. He provides quantum physics-based theory and new experimental data verifying the metaphysical truth that exists when employed in the context of a new science, science within the primacy of consciousness. With a new holistic worldview, Goswami also discusses the creativity of the body to self heal; the power of spiritual practice and how to choose a meditative path; and the five stages of spiritual growth, culminating in the ability to transcend the physical laws of nature. Readers, scientists and spiritual leaders alike will find answers to many of life's deepest mysteries.

Captive in the Underworld, Persephone tries her best to resist the wonders of this mystical realm and the allure of its ruler. However, this is much easier said than done when the Underworld offers her freedoms she has never experienced, and Hades offers her pleasure the likes of which she has never known...Meanwhile, in the land of the living, Demeter's search for her daughter culminates in a devastating discovery that causes her to unleash her wrath on an unsuspecting world...

Xudong Zhang offers a critical analysis of China's 'long 1990s', the tumultuous years between the 1989 Tiananmen Square crackdown and China's entry into the World Trade Organisation in 2001.

Nelson Goodman's disparate writings are often written about only within their own particular discipline, such that the epistemology is discussed in contrast to others' epistemology, the aesthetics is contrasted with more traditional aesthetics, and the ontology and logic is viewed in contrast to both other contemporary philosophers and to Goodman's historical predecessors. This book argues that that is not an adequate way to view Goodman. The separate disciplines of ontology, epistemology, and aesthetics should be viewed as sequential steps within his thought, such that each provides the ground rules for the next section and, furthermore, providing the reasons for limitations on the terms available to the subsequent writing(s). This is true not merely because this is the general chronology of his writing, but more importantly because within his metaphysics lies Goodman's basic nominalist ontology and logic, and it is upon those principles that he builds his epistemology and, furthermore, it is the sum of both the metaphysics and the epistemology, with the nominalist principle as the guiding force, which constructs the aesthetics. At the end of each section of this book, the consequent limitations imposed on his terms and concepts available to him are explicated, such that, by the end of the book, the book delineates the constraints imposed upon the aesthetics by both the metaphysics and the epistemology. This book will benefit not only the professionals in the field of philosophy, but will also help both graduate and upper level undergraduate students understand Goodman's disparate writings within their proper context, and hopefully will also encourage them to view philosophical thinking in a less truncated and departmentalized way.
