The Pengerang Integrated Petroleum Complex (PIPC) is a huge development that has emerged on the east coast of Johor. Comprising Petronas's largest refinery facility and numerous ancillary and supporting industrial areas, it is pegged to diversify Malaysia's petrochemical industry and reap the benefits of the area's fortunate position on international maritime trade routes. While initial responses to the PIPC development were of concern for Singapore's oil and gas business, the island-nation's long reputation and position in the industry means that the PIPC has some steep learning curves to traverse before coming on par with its southerly neighbour. However, the PIPC is likely to provide a solution to Singapore's limitations in terms of costly services and limited land space. It may also rejuvenate an industry now seen by some SMEs to be somewhat stagnant. While there are myriad global trends that may inhibit the complete success of the PIPC, it seems to be well placed to provide economic spillover benefits for Johor and Malaysia. Even if it does not become a top regional player, it will be able to meet local demands for Euro 5 quality products. The PIPC received a boost with Saudi Aramco's commitment to invest in the Refinery and Petrochemical Integrated Development (RAPID) project. More investments may come on board when the refinery begins operations in 2019. A full assessment of PIPC's success or failure can be conducted once other announced developments are completed and full operations begin.

In 1990, the Malaysian state of Johor—along with Singapore and the Indonesian island of Batam—launched the Growth Triangle to attract foreign direct investment. For Johor, this drive was very successful, transforming its economy and driving up income levels. Today, Johor is one of Malaysia's "developed" states, housing large clusters of electrical and electronics, food processing, and furniture producing firms. While welcome, this structural transformation has also entailed important challenges and strategic choices. After three decades, Johor's manufacture-for-export model is under question, as it faces increasing competition and flat-lining technological capabilities. In response, the state has sought to diversify its economy through strategic investments in new, mostly service-based activities. Yet, Johor retains pockets of excellence in traditional sectors that also require support and policy attention. The state's economic transformation has also been accompanied by far-reaching political, social, and environmental change. Not least, Johor's growing population has generated demand for affordable housing and put pressure on public services. The strain has been exacerbated by workers from other states and overseas. These demographic factors and large-scale projects have, in turn, put stress on the environment. These economic and social changes have also had political ramifications. While Johor is a bastion of two of the country's oldest and most established political parties, the state's large, urban and connected electorate has made it hospitable terrain for new political organisations. Beyond electoral politics, Johor is also the home of a powerful and influential royal family, with very specific ideas about its role in the state's political life. Building on earlier work by the ISEAS – Yusof Ishak Institute on the Singapore-Johor-Riau Islands Cross-border Region, this book focuses on this important Malaysian state, as it deals with important domestic challenges on one hand and strives to engage with international markets on the other. "I have always felt that there are many more complementarities possible between Singapore and Johor. This would be to the benefit of both economies, but the political division between the two was just too great. The two economies lived adjacent but separate lives—Singapore looking out to the world and Johor looking north—until initiatives such as the Iskandar Malaysia development corridor began to change things significantly. The concern now is that the pendulum may have swung too much the other way, driven by the huge income and price differentials as well as Singapore's global city status. Francis and Serina's compilation is a welcomed attempt at understanding Johor in a much more comprehensive manner; not just its changing economy but how its politics and society have been impacted by these changes – which is a more endogenized view of economic integration." — Dr Nungsari Ahmad Radhi, former MP Balik Palau and Executive Director, Khazanah Nasional "Drawing on the expertise of internationally known specialists, this insightful collection explores the multiple ways in which Johor's economic development has influenced the contemporary political scene, and the effects on local society and the environment. Skillfully edited and meticulously researched, *Johor: Abode of Development?* is not merely required reading for anyone interested in contemporary Malaysia, but will be of immense value to historians of the future."—Barbara Watson Andaya, Professor of Asian Studies, University of Hawai'i

*Performance Management for the Oil, Gas, and Process Industries: A Systems Approach* is a practical guide on the business cycle and techniques to undertake step, episodic, and breakthrough improvement in performance to optimize operating costs. Like many industries, the oil, gas, and process industries are coming under increasing pressure to cut costs due to ongoing construction of larger, more integrated units, as well as the application of increasingly stringent environmental policies. Focusing on the 'value adder' or 'revenue generator' core system and the company direction statement, this book describes a systems approach which assures significant sustainable improvements in the business and operational performance specific to the oil, gas, and process industries. The book will enable the reader to: utilize best practice principles of good governance for long term performance enhancement; identify the most significant performance indicators for overall business improvement; apply strategies to ensure that targets are met in agreed upon time frames. Describes a systems approach which assures significant sustainable improvements in the business and operational performance specific to the oil, gas, and process industries Helps readers set appropriate and realistic short-term/ long-term targets with a pre-built facility health checker Elucidates the relationship between PSM, OHS, and Asset Integrity with an increased emphasis on behavior-based safety Discusses specific oil and gas industry issues and examples such as refinery and gas plant performance initiatives and hydrocarbon accounting

Derived from the renowned multi-volume International Encyclopaedia of Laws, this book provides a systematic approach to legislation and legal practice concerning energy resources and production in Malaysia. The book describes the administrative organization, regulatory framework, and relevant case law pertaining to the development, application, and use of such forms of energy as electricity, gas, petroleum, and coal, with attention as needed to the pervasive legal effects of competition law, environmental law, and tax law. A general introduction covers the geography of energy resources, sources and basic principles of energy law, and the relevant governmental institutions. Then follows a detailed description of specific legislation and regulation affecting such factors as documentation, undertakings, facilities, storage, pricing, procurement and sales, transportation, transmission, distribution, and supply of each form of energy. Case law, intergovernmental cooperation agreements, and interactions with environmental, tax, and competition law are explained. Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this book a valuable resource for energy sector policymakers and energy firm counsel handling cases affecting Malaysia. It will also be welcomed by researchers and academics for its contribution to the study of a complex field that today stands at the foreground of comparative law.

*Environmental Policies in Asia* highlights the environmental challenges Asian planners and policymakers face as the continent undergoes rapid economic growth in the 21st Century. Edited by Jing Huang and Shreekanth Gupta, with contributions from leading Asian scholar practitioners, this timely and unique volume is the first of its kind to look at environmental policies and governance from the perspective of seven dynamic Asian countries. These include developed economies of Japan and Singapore, emerging giants such as China and India and rapidly developing nations such as Vietnam, Indonesia and Malaysia. The volume discusses environmental challenges that stem from issues as local as poor recycling practices, to ones that are as vast and complex as global climate change. Engaging, accessible, and pan-Asian in scope, the essays also present creative ways in which these challenges are being addressed. This book is valuable to anyone who is keen on understanding Asia, its growth, and whether its rise is environmentally sustainable. Contents: Introduction: Environmentally Sustainable Development in Asia: Challenges and Choices (Jing Huang) Key Issues in Combating Environmental Concerns in Asia: Environmental Policy and Governance in a Federal Framework: Perspectives from India (Shreekanth Gupta) Japan's Role in Climate

Change Issues (Ryuzo Yamamoto)Environmental Impacts of 'Fast Development in Asia':Policies for Environmentally Sustainable Development: Perspectives from Vietnam (Nguyen Huu Ninh)Resource-Environmental Foundation for Green and Low-Carbon Development in China (Zhu Shou-xian)China's Environmental Governance: Evolution and Limitations (Wu Fuzuo)Fragmentation to Integration: Environmental and Sustainable Development Challenges in Malaysia (Chee Yoke Ling and Lim Li Ching)Environmental Policy Implementation: Achievements and Challenges:Governing the Common Firm: The Evolution of Environmental Policy for Small Businesses in India (Sudhir Chella Rajan)Environmental Management 3.0: Connecting the Dots between Pollution, Sustainability, Transparency and Governance in Indonesia (Shakeb Afsah and Nabel Makarim)Environmental Law, Policy, Governance and Management for Cities: Getting it right for a Sustainable Future — The Singapore Experience (Lye Lin-Heng)Trade-offs and Synergies for Sustainable Development and Climate Stabilisation in Asian regions (Keigo Akimoto, Fuminori Sano, Ayami Hayashi, Takashi Homma, Junichiro Oda, Kenichi Wada, Miyuki Nagashima, Kohko Tokushige and Toshimasa Tomoda)Concluding Thoughts:Future Environmental Challenges for Asia (Shreekant Gupta) Readership: Environmental policy students, general public interested in Asia and its challenges, policymakers, environmental professionals and practitioners. Key Features:No books on environmental policies in Asian countries have been published in recent years so this collection is unique and the first of kindUnique in its pan-Asian focus; the first volume to draw together eminent Asian scholar-practitioners on this topicExplicit focus on environmental issues, which is very timely (e.g., global warming is a pressing issue)Keywords:Envrionmental Policy;Sustainable Development;Environmental Management;Asia;China;India;Japan;ASEAN

This book presents part of the proceedings of the Manufacturing and Materials track of the iM3F 2020 conference held in Malaysia. This collection of articles deliberates on the key challenges and trends related to manufacturing as well as materials engineering and technology in setting the stage for the world in embracing the fourth industrial revolution. It presents recent findings with regards to manufacturing and materials that are pertinent towards the realizations and ultimately the embodiment of Industry 4.0, with contributions from both industry and academia.

Malaysia's natural resources and its well-educated population are some of the many credentials that keep the country in good stead, with priorities centred on preparing for the ASEAN Economic Community in 2015 and steering the policy framework toward more inclusive political representation. The economy is built around global trade, and the government is working to encourage greater private investment. Malaysia's GDP per capita is the highest in South-east Asia, with the exception of smaller countries like Singapore and Brunei Darussalam, \$ reaching 10,548 in 2013 based on a GDP of \$ 307.25bn and a population of almost 30m. The country produces 39% of the world's palm oil and 44% of its exports, and Increasing global demand for the commodity Bodes well for the industry. Malaysia has seen its stock rise in the World was Bank's Annual " the Ease of Doing Business" report, moving up to 6th position in 2014 from 8th the previous year. 's Avatar Recent times have seen the Government push hard for a Greater role for the : private sector in the country's development, with the various Government Programmes aiming to boost Transparency, accountability and Sustainable Growth. The overall aim of these plans is to elevate Malaysia to become a high -income country by 2020.
