The "resonance" in nuclear magnetic resonance When we place the sample in the magnet, it is also inside another, smaller coil which can be used to send radio-frequency pulses into the sample. The electromagnetic waves in the radio region have the lowest energy and the lowest frequency of the entire electromagnetic spectrum .

Imaging using nuclear magnetic resonance (NMR) was first demonstrated in the 1970s, and has since seen huge application in diagnostic radiology. It has been described using a number of formalisms and at a number of levels of complexity. This chapter traverses a path inbetween unnecessary rigorous complexity and over-simplifying inaccuracy of NMR imaging, and involves a discussion of most ...

Principles of Nuclear Magnetic Resonance in One and Two ...

Principles of nuclear magnetic resonance. Koutcher JA, Burt CT. The basic principles of nuclear magnetic resonance (NMR) are discussed. The concepts presented include a qualitative quantum-mechanical approach to NMR spectroscopy and a classical-mechanical approach to time-dependent NMR phenomena (relaxation effects).

Principles of nuclear magnetic resonance.

Principles of NMR. The nuclei of all elements carry a charge. When the spins of the protons and neutrons comprising these nuclei are not paired, the overall spin of the charged nucleus generates a magnetic dipole along the spin axis, and the intrinsic magnitude of this dipole is a fundamental nuclear property called the nuclear magnetic moment,  $\mu$ .

Principles of NMR. - Imperial College London

Nuclear magnetic resonance (NMR), selective absorption of very high-frequency radio waves by certain atomic nuclei that are subjected to an appropriately strong stationary magnetic field. This phenomenon was first observed in 1946 by the physicists Felix Bloch and Edward M. Purcell independently of each other.

Nuclear magnetic resonance | scientific technique | Britannica

Nuclear magnetic resonance (NMR) is a physical phenomenon in which nuclei in a strong constant magnetic field are perturbed by a weak oscillating magnetic field (in the near field) and respond by producing an electromagnetic signal with a frequency characteristic of the magnetic field at the nucleus.
