Design Codes & Standards, Seismic Analysis, Seismic Analysis as per ASCE-7 and IBC codes. As mentioned in the previous article, Seismic Analysis: UBC 97 provisions, the seismic analysis in the design of buildings especially high rise towers is a very important factor to consider. Because earthquake loads together with the wind loads have a huge impact on the design result.

Note that invoking this option substantially increases the number of load cases created. For instance, a total of 36 different load cases (40 if Generate Additional Load Cases for Analysis with Tension-Only Members is also checked) are created for IBC 2000 seismic load case. The following figure shows an example of the generated load cases.
