Snort's open-source network-based intrusion detection/prevention system (IDS/IPS) has the ability to perform real-time traffic analysis and packet logging on Internet Protocol (IP) networks. Snort performs protocol analysis, content searching and matching. The program can also be used to detect probes or attacks, including, but not limited to, operating system fingerprinting attempts, semantic URL attacks, buffer overflows, server message block probes, and stealth port scans.

[Snort \(software\) - Wikipedia](#)

Snort is the foremost Open Source Intrusion Prevention System (IPS) in the world. Snort IPS uses a

How to Secure Your Network Using IDS/IPS Application Tool

Tuning an IDS/IPS From The Ground UP by Brandon Greenwood - September 27, 2007 . This paper examines one of the many different methodologies to configuring or tuning an Intrusion Detection System or Intrusion Prevention System (IDS/IPS). The proper configuration of an IDS is a bit of an art because there are so many different ways to do it.
