Space Medicine In

Project Mercury,

Introduction.

Introduction. THE

DECISION OF THE

UNITED STATES in

1958 to initiate a

manned space flight

program was based

upon the confident

**Get Free Space
Medicine In**
assumption that
technology could
provide the life-support
systems necessary for
human survival in the
hostile space
environment. Primary
responsibility for
developing these flight
systems obviously
would rest with physical
scientists and engineers.

Project Mercury, Introduction

Space Medicine In
Project Mercury,
CH7-2. Medical
Monitors. As early as
October 29, 1959, Dr.
Stanley C. White, STG,
had noted in a
memorandum for the
Project Director that as
Mercury moved into
actual manned
operations, there would

The basic reasoning behind this idea was the fact that little was known about the effects of combinations of high stresses such as would occur in the Project Mercury missions. At this briefing, representatives of the Space Task Group had pointed out that animal flights were involved in the program, but that the
