The V-twin engines were also used in the popular three-wheelers of Morgan cyclecars. Although more like a car than a motorcycle and sidecar, the Morgans were classified for tax purposes the same as sidecars. The engines were front mounted in the Morgan's and many of the J.A.P. variants were used, including singles, twins, V-twins inside valve ...

V Twin Engine Plans This is a V-Twin engine that is machined entirely from bar stock. It has no prototype as it is entirely my own design. Being a single crank pin 90 degree engine, it is extremely smooth and vibration free. V type engines other than 90 degree can not be balanced except with special balancer shafts, etc. that you wouldn't want!

A V-twin engine, also called a V2 engine, is a two-cylinder piston engine where the cylinders share a common crankshaft and are arranged in a V configuration. Although widely associated with motorcycles, V-twin engines have also been used for industrial engines and in several small cars. The V-twin design dates back to the late 1880s.

The engine is a 15cc (0.91 cu in), 90° V Twin 4 stroke, with overhead valves activated by push rods. The engine can be constructed either for spark ignition or glow plugs and will happily swing a 16" propeller at 6,000 rpm. The engine weighs in at just 30oz (850g) less coil and battery pack and would be perfect for scale models with wingspans of 60" - 72".
